Ligier JS F4 Technical Advisory Memo

№: JSF4 TRB-2025-01

Date: February 6, 2025

Subject: Changes to Rules Regarding Data Overlays on Video

The 2025 rules will be released soon, but we wanted to inform teams of a change in case they are looking to purchase a video camera.

In previous seasons, Article 26.9 prohibited any data other than a date and time stamp to be overlaid on the video. With the JS-F4-22 being delivered with the AiM Smarty Cam 3 GP system, we are changing the rules for the JS-F4-16 cars as well to allow data overlay on the video.

While any video camera/system meeting the rules is still permitted, we recommend the AiM Smarty Cam 3 GP system as that is the system that Ligier will be stocking parts and replacement systems for on their trailer.

Regardless of the video system chosen, the video system may not be connected to the vehicle's CAN network. The only data that may be overlaid on the video is the data supplied by the video system (GPS, accelerometers, track map, etc.).
